

FIG. 1 is a block diagram of a system for providing an application service over the Internet. The system includes a client computer 10, the Internet 20, and an application service provider 30. The client computer 10 sends an HTTP request to the Internet 20, which is received by the application service provider 30. The application service provider 30 includes an Internet information server 40, a Microsoft transaction server 50, a SQL server 60, and an index server 70. The Internet information server 40 is connected to the Microsoft transaction server 50, which is connected to the SQL server 60 and the index server 70. The Internet information server 40 also provides active server pages to the client computer 10.

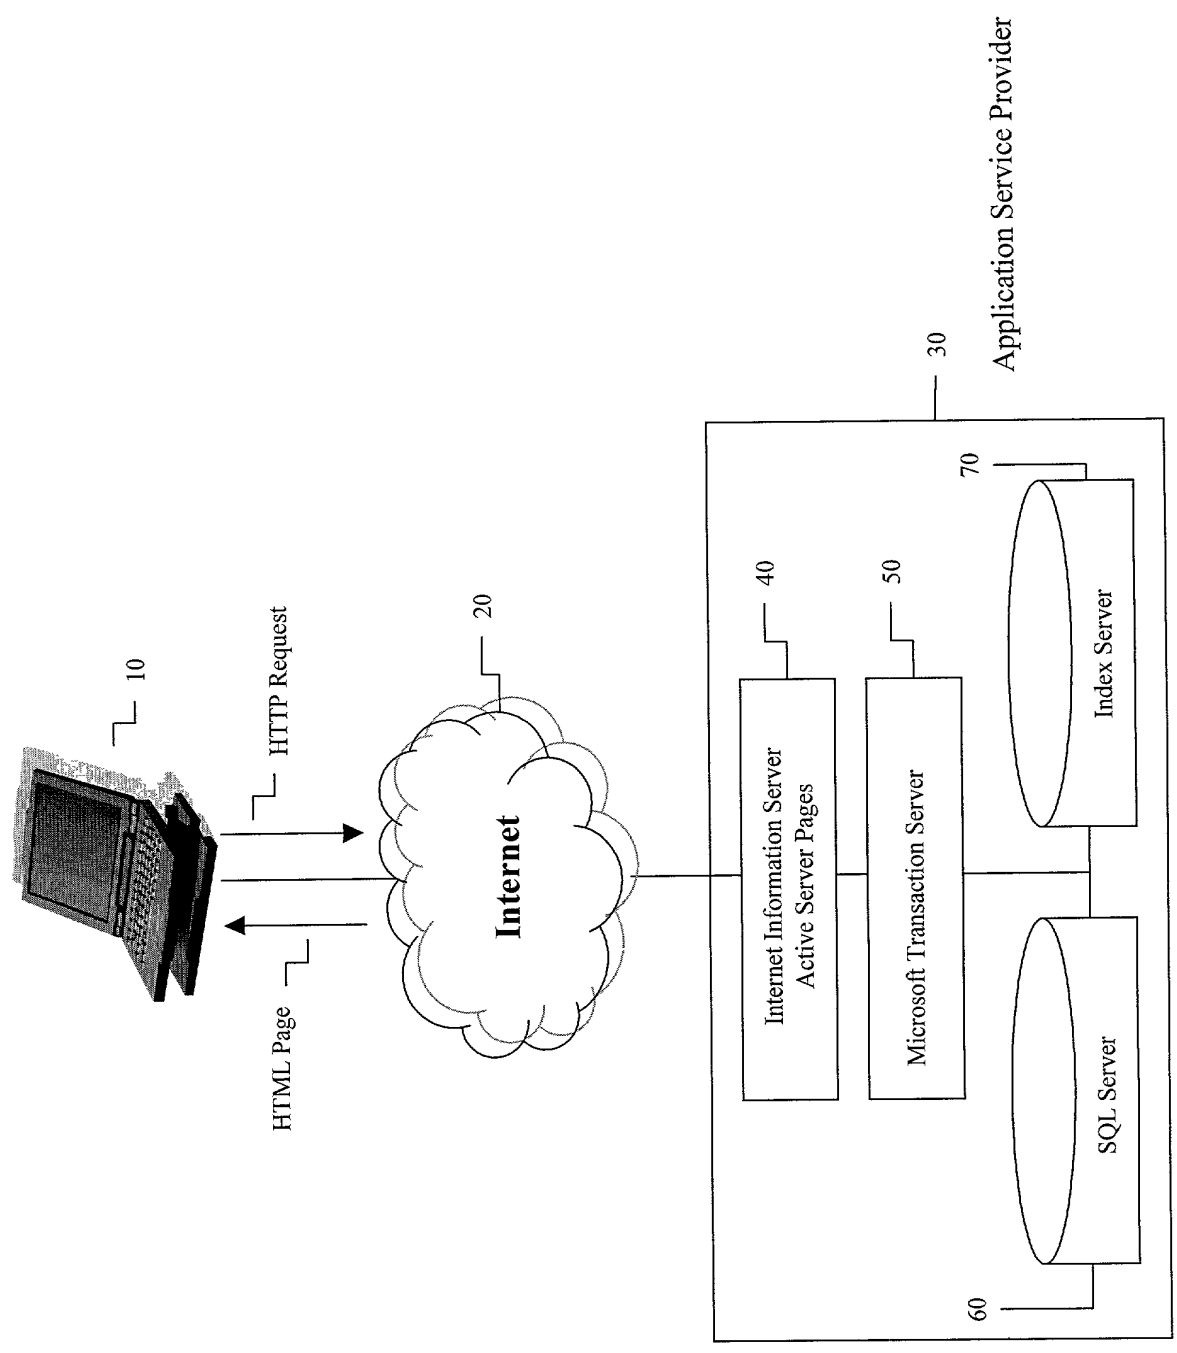

FIG. 1

After using these new data sets, we have found that the model can be trained to predict the correct formulation type.

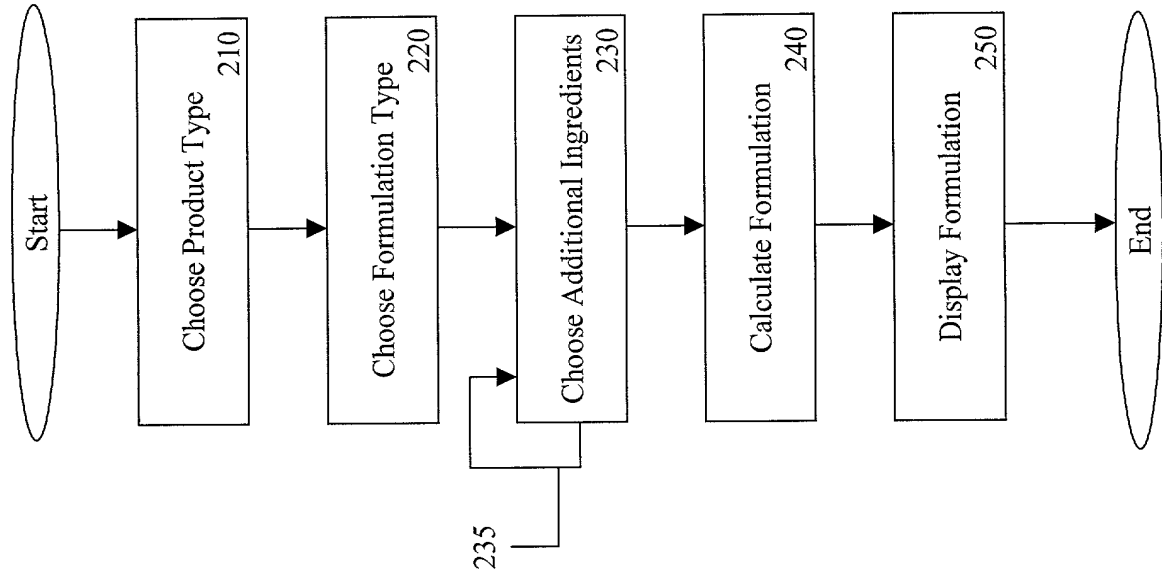

FIG. 2

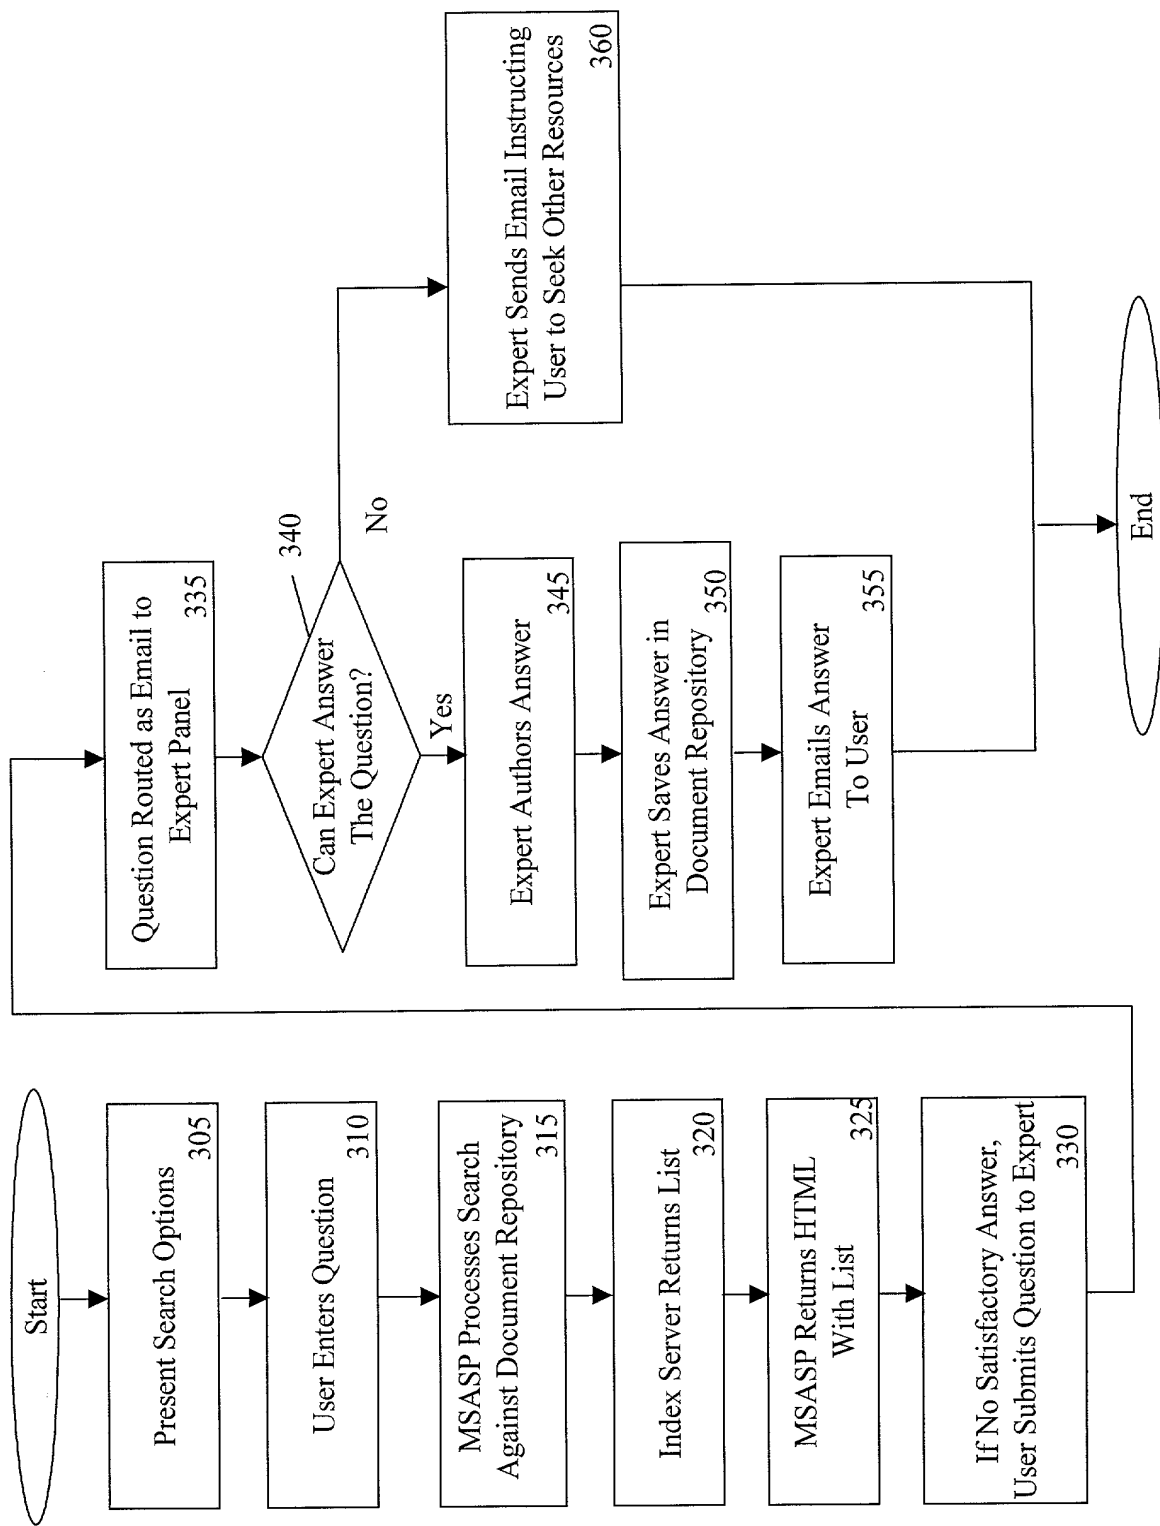

FIG. 3

new data can be used to improve the accuracy of the model and the results of the analysis.
